

$\lambda_0 = 1.0$, $C = 0.4$, $\phi_g = 0.0119$ rad, $T = 1.0$ — $n = 3$, equal weights, x_1 optimised (50-pt grid)

$\min_{x_1} \sigma(\hat{\phi}_g)$ — C-optimality

$\log_{10} \det(\mathcal{I}^{-1})$ — D-optimality

Optimal x_1^*/π (C-criterion)
